PROFESSIONAL SUMMARY

Senior Fullstack Developer with 11 years of experience across the full web stack — React/TypeScript on the frontend, Node.js and serverless architecture on the backend. Proven track record building complex UI systems, high-performance backend services, and the integrations connecting them, across e-commerce, SaaS, and fintech platforms. Comfortable owning a feature end to end: component architecture and state management on one side, API design, data pipelines, and third-party integrations on the other. Experienced with AWS, both SQL and NoSQL data stores, and PR-based team workflows, with a strong quality discipline (unit/integration testing, monitoring, incident response).

SKILLS

- **Frontend:** React, TypeScript, Redux, Component Architecture, State Management, React Native, HTML5, CSS3, JavaScript (ES6+), jQuery, Bootstrap
- **Backend:** Node.js, Express, J2EE, RESTful API design, AWS Lambda, Amplify Functions, Molecular Framework, GraphQL
- **Databases:** MongoDB, MySQL, DynamoDB, Elasticsearch, Apache Cassandra (SQL & NoSQL)
- **Cloud & DevOps:** AWS (S3, Lambda, CloudWatch), Serverless Architecture, Git (PR-based workflows), ESLint
- **Integrations & Real-Time:** Third-party/vendor API integration, Socket.io, WebSocket-based real-time systems, webhook-driven event processing
- **Testing & Quality:** Unit & Component Testing, Selenium, JUnit, code review discipline

PROFESSIONAL EXPERIENCE

Senior Fullstack Developer
March 2023 – February 2026

Fairmart

- **Serverless Architecture & Data Ingestion:** Engineered a two-stage validation and ingestion pipeline for merchant product catalogs (8,000+ records) using AWS Lambda. Optimized for serverless execution limits by processing Base64-encoded CSVs and implementing asynchronous batch updates (25 records per chunk) for DynamoDB.
- **Complex UI Engineering:** Developed a recursive Category Selection Modal using React, MUI, and Redux to transform flat JSON API data into nested tree structures, allowing merchants to map thousands of products to Lazada/Shopee taxonomies.
- **Omnichannel Integration Services:** Built and maintained backend services synchronizing pricing, stock, and product availability across Shopee, Lazada, and Google in real time, processing thousands of daily update events via webhook-driven integrations.
- **Real-Time Order Synchronization:** Built a high-performance Countdown UI in React synchronized with AWS Lambda events and S3 triggers to provide real-time shipping deadlines, significantly reducing merchant order expiration rates.
- **State & UI Orchestration:** Centralized application logic by architecting a Global UI Layer (Modals/Drawers) using React Context and Redux, decoupling UI triggers from page-level logic and reducing code duplication by 30%.

Fullstack Developer
September 2022 – January 2023

Appvantage

- **Enterprise Application Engineering:** Engineered full-stack web application features for enterprise automotive and asset finance portals using React, TypeScript, and Node.js.
- **GraphQL & API Integration:** Consumed and optimized GraphQL schemas and queries to streamline data fetching and state orchestration for complex financial calculation workflows.
- **UI Component Design:** Built reusable UI components and a modular design system, ensuring high performance, responsive layout integrity, and cross-browser consistency.

Senior Software Engineer June 2021 – September 2022

Brycen Myanmar

- **SaaS Product Engineering:** Architected the frontend for a large-scale HR platform, delivering complex modules for automated payroll processing and resource scheduling.
- **Payroll Processing Engine:** Developed payroll processing modules using Java/J2EE, automating salary computation, overtime, deductions, and statutory contributions — reducing monthly payroll execution from 2-3 days of manual processing to a single structured payroll cycle.
- **Advanced UI Orchestration:** Engineered a high-performance Schedule Management Engine (Google Calendar style) using React, optimized to render and manage hundreds of concurrent employee scheduling data points without performance degradation.

Fullstack Developer May 2018 – May 2021

StudioAMK

- **Microservices Architecture:** Architected and deployed a scalable Reseller Portal using Node.js and MySQL, enabling vendors to securely generate digital currency tokens and manage high-volume transaction ledgers.
- **Real-Time Streaming Systems:** Engineered an engagement platform featuring Facebook Live integration and a custom WebSocket-based donation system, handling real-time data synchronization for thousands of concurrent users.
- **High-Concurrency Messaging:** Developed a secure internal communication platform using Socket.io, optimizing server-side event handling to support low-latency messaging for corporate clients.
- **Platform Optimization:** Enhanced the core booking engine and property-listing modules for MetroResidences (Singapore), improving API response times and frontend rendering performance.

Fullstack Developer July 2015 – April 2018

Interwebbing Technology

- **Early Tech Adoption:** Spearheaded the development of internal tools and cross-platform mobile prototypes using React and Node.js during the early stages of the frameworks' lifecycles.
- **Mobile POS Engineering:** Architected a React Native point-of-sale (POS) application, implementing mission-critical features including real-time inventory management and dynamic receipt generation.
- **High-Scale Data Systems:** Built a collaborative Task Management System featuring real-time ticket lifecycles and a custom drag-and-drop UI. Leveraged Apache Cassandra to ensure high-availability and distributed data storage.

Junior Developer May 2014 – June 2015

Acroquest Myanmar

- **Enterprise Healthcare Systems:** Maintained the integrity of a mission-critical Japanese Healthcare Web System (J2EE), implementing rigorous quality control protocols for medical record processing.
- **Test Automation Engineering:** Engineered and executed comprehensive automated test suites using Selenium and JUnit, ensuring 100% data accuracy and system-wide stability across complex healthcare workflows.
- **Cross-Border Collaboration:** Collaborated with international teams to deliver high-standard software solutions, adhering to strict Japanese quality benchmarks.
